Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2, 4, 6, and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Kobayashi et al. (Kobayashi).

Regarding claim 1, a prethreading mechanism for bringing the tape into contact with the rotary head drum is taught at col 4, lines 39-42 and col 14, lines 1-4. The detection of dew condensation on the rotary head drum is taught at col 4, line 65 to col 5, line 3.

Regarding claim 2, dew condensation detected from a variation in rotation of the rotary head drum is taught at col 4, line 65 to col 5, line 3.

Regarding claim 4, dew condensation detected from a rotation of a tape supply reel is taught at col 11, lines 63-67.

Regarding claim 6, the detachment of the tape from the rotary head drum after the dew condensation is detected is taught at col 4, line 65 to col 5, line 9.

Regarding claim 8, a tape winding member for winding the tape around the rotary head drum that also serves as a prethreading mechanism is taught at col 4, lines 39-42.

Allowable Subject Matter

3. Claims 3, 5, and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claim 3, dependent on claim 1, teaches dew condensation is detected from a change in tension of the tape. Claim 5, dependent on claim 1, teaches the prethreading mechanism has a folding two-stage arm, and the tape is brought into contact with the rotary head drum by extending the two-stage arm. Claim 7, dependent on claim 6, teaches the drying of the rotary head drum by rotating the rotary head drum during a state in which the tape is detached from the rotary head drum.

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mitchell R Slavitt whose telephone number is (571) 272-7562. The examiner can normally be reached on M-F (6:30-4:00), 2nd Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David R Hudspeth can be reached on (571) 272-7843. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
